Type: ROUTINE INSPECTION
Date: 31-MAR-2025

3.11(d)

Cleaning, sanitization, housekeeping, and pest control.

The current pest control program of the facility is not meeting USDA requirements to prevent infestation and contamination of the facility by mice. During facility inspection the following was observed:

- 1) mouse feces, some intermixed with wall foam insulation particles, along floors and walls in whelping, prep/treatment and storage areas.
- 2) mouse feces on counter next to bowls and sink in prep/treatment room
- 3) mouse feces on refrigerator support shelf in prep/treatment room
- 4) mouse feces on shelving unit and on food bags in bedding/food storage room
- 5) 10 dead mice were visually observed on glue traps in the facility

Rodents can carry diseases which may infect and harm other animal species, including dogs. These diseases may be spread through rodent droppings and urine. An effective pest control program, including control of rodents, must be established and maintained to prevent pest infestation and contamination, and to ensure the health and well-being of facility animals.

Correct by April 07, 2025

This inspection and exit interview were conducted with a facility representative.
