Type: ROUTINE INSPECTION
Date: 13-AUG-2014

3.78(d)

OUTDOOR HOUSING FACILITIES.

On the southwest side of the main zoo property there are two snow macaques in an enclosure that lacks a perimeter fence on the backside (far side from the public area) of their enclosure. Inspectors observed the area behind these animals was a swampy area and the licensee reports that the swamp has always served as these animals perimeter barrier. An incomplete perimeter fence could potentially allow entry of unwanted animals or unauthorized persons. Also, without a complete perimeter fence there is no secondary containment system in place if animals were to escape from their primary enclosure. This enclosure must be inside an area surrounded by a perimeter fence that is at least 6 feet tall and at least 3 feet from the primary enclosure.

Correct By: November 21, 2014

3.127(d)

FACILITIES, OUTDOOR.

Some animals that require a perimeter fence are being housed outside of the zoo's main perimeter fence.

** On the southwest side of the main zoo property there is a zebra and a camel in an enclosure that lacks a perimeter fence on the backside (far side from the public area) of their enclosure. Inspectors observed the area behind these animals was a swampy area and the licensee reports that the swamp has always served as these animals perimeter barrier.

** On the northwest corner, 2 Oryxes are housed in an enclosure that uses the facility's perimeter fence as the north side of their primary enclosure.

** The southernmost side of the property has a partial perimeter fence. This area has various North American wildlife species on exhibit. An inspector followed this fence line to where it ended and was able to continue walking through the woods to the back part of a subdivision.

Inspection Report

The licensee stated that he had approval in the past for the fence not to be complete in these areas and to use the swamp as a barrier. However, there is no approved variance. The licensee also stated that the perimeter fence cannot be constructed in these areas due to the swampy ground. An incomplete perimeter fence could potentially allow entry of unwanted animals or unauthorized persons. Also, without a complete perimeter fence there is no secondary containment system in place if animals were to escape from their primary enclosure. These outdoor primary enclosures must be inside an area completely surrounded by a perimeter fence that is at least 8 feet tall for potentially dangerous animals and at least 6 feet tall for other animals. The perimeter fence must be at least 3 feet from the primary enclosure.

Correct By: November 21, 2014

Inspection and exit briefing conducted with the zookeeper.
