3.81

ENVIRONMENT ENHANCEMENT TO PROMOTE PSYCHOLOGICAL WELL-BEING.

The facility doesn't have an approved and documented plan for the environmental enhancement of the lemur. The lemur does have enrichment in the form of toys within its enclosure. However, there must be a documented plan addressing the various aspects of environmental enhancement that is approved by the facility's veterinarian.

Environmental enhancement is crucial to enriching non-human primates.

Document a plan for the environmental enhancement of the lemur. Assure that it is approved by the facility's veterinarian.

To be corrected: 8-10-16

3.127(d) REPEAT

FACILITIES, OUTDOOR.

The Patagonian cavy enclosure continues to lack a perimeter fence. The enclosure now houses a pair of Patagonian cavy and has new fencing against and adjacent to the enclosure. The new fencing is only approximately four feet tall and doesn't extend around the entire enclosure. Perimeter fences prevent unauthorized persons and animals from contacting the animal(s) contained within, Perimeter fences also provide a secondary containment system if the animal(s) escape.

A perimeter fence measuring at least six feet in height and at least three feet from the enclosure must be erected.

Note: Fencing panels were placed around the enclosure between the time of inspection and the exit briefing. The panels are not yet secured to prevent the fence from moving.

Inspection Report

1. Excessive, compacted feces were present on the ground of the adult wallaby enclosure during the time of inspection. The wallaby was housed in a large collapsible dog crate with a removable plastic floor. At least 1/3 of the floor had compacted feces on it.

2. Excessive feces were present on the ground of the woodchuck enclosure during the time of inspection. The woodchuck was housed in a collapsible dog crate with a removable plastic floor. At least 1/4 of the floor had feces on it. Additionally, Several flies were observed inside of the enclosure, on the feces, and on the groundhog.

Excessive feces produce odors and can serve as a reservoir for diseases.

Clean and sanitize both enclosures and repeat often enough to prevent build up.

Note: The wallaby was placed in a clean, larger enclosure. The woodchuck's enclosure was cleaned. Both occurred between the time of inspection and the exit briefing.

3.131(d)

SANITATION.

Excessive amounts of flies were present inside the building housing several juvenile animals during the time of inspection. The flies could be seen inside of the animal enclosures and on the animals. Three fly strips were present during the time of inspection, however; they were not effectively controlling the population of flies.

Flies can carry many diseases.

Establish, implement, and maintain an effective program to control the flies at the facility.

To be corrected: 7-30-16

The inspection exit briefing was conducted with the facility owner.
