Type: ROUTINE INSPECTION

Date: 01-SEP-2022

2.134(a)

Contingency planning.

The facility does not have a documented contingency plan.

If an emergency or natural disaster were to occur at the facility, the lack of a written contingency plan could impact animal health if the staff are not prepared to respond to the situation appropriately.

Exhibitors must develop, document, and follow an appropriate contingency plan to provide for the humane handling, treatment, transportation, housing, and care of their animals in the the event of an emergency or disaster.

Correct by: September 15, 2022.

3.125(a)

Repeat

Facilities, general.

There were several areas of the facility in a state of disrepair.

In the large sheep and goat pasture, the right wall of the run-in shelter has detached from the support posts. This wall separation caused an approximately 18" gap at the base of the building and exposed several sharp nails at the level of the animals. There were also several pieces of plastic and other trash scattered throughout the pasture.

Additionally, a tree has fallen onto the rear fence of the Nature Trail enclosure housing seven goats and emus. The fence integrity has been maintained, however, the tree is still suspended and could potentially fall on the animals. In the same

Inspection Report

enclosure, another tree is in the process of falling onto the front fence. There is a large crack and break in the tree trunk causing it to lean over the fence.

Failure to maintain enclosure fencing and shelters can allow for gaps, unstable structures, or sharp points which can result in injury, entrapment, or escape of the animals.

Facilities shall be maintained in good repair to protect the animals from injury and contain them.

3.130

Watering.

There was a buildup of algae and debris on the inside of the main automatic waterer in the large sheep and goat pasture. The water is clear and the health of the animals does not appear to be impacted by the condition of the waterer at this point.

Failure to clean water receptacles on a regular basis can deter the sheep and goats from drinking and can introduce disease hazards to the animals.

The licensee must clean the waterer at a frequency that will ensure potable water is provided to the regulated animals in a sanitary receptacle.

Correct by September 4, 2022 .

3.131(d)

Sanitation.

There were a large number of flies in the petting area for the young hoofstock. Several flies were observed flying around the bedding and side walls of the enclosure.

Failure to maintain an effective insect control program can allow for the introduction and spread of disease hazards to the animals.
