JAN THIEL INC.
51 I-25 SERVICE ROAD EAST
CHEYENNE, WY 82007

Customer ID: **14872**
Certificate: **83-C-0002**
Site: 001
JAN THIEL, INC.

Type: ROUTINE INSPECTION
Date: 23-JUN-2021

2.40(b)(3) Direct

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

-The male, adult dromedary camel, "Meshack," has an approximately baseball-sized swelling on the underside of his left jaw, with a concave central wound draining a thick, white material. The facility representative stated that the attending veterinarian previously debrided and treated the wound, and prescribed antibiotic treatment, which the facility administered accordingly. The swelling and draining returned after completion of the prescribed treatment, but the facility owner did not communicate this to the attending veterinarian. The attending veterinarian told the inspectors that he expected the facility to inform him if the problem did not resolve.

-There is one white, adult female goat with an enlarged, right mammary gland that is reddened, with two wounds. One wound is quarter-sized and surrounded by crust,. A smaller, adjacent wound is linear and fresher in appearance. The gland swelling is significant enough to cause the teat to occasionally scrape on the ground as she walks. The facility was aware of the goat's condition but did not notify the attending veterinarian.

Timely reporting of unresolved or new conditions is important to prevent worsening of any problems and ensure proper care. The facility must have a mechanism of direct and frequent communication with the attending veterinarian so that timely and accurate information on problems of animal health, behavior, and well-being are conveyed to the attending veterinarian. Additionally, the two animals listed above must be evaluated by a veterinarian to provide adequate

veterinary care as required in section 2.40(b)(2). Ensure that they are treated in accordance with that veterinarian's recommendations including any necessary follow-up treatments required.

To be corrected by 06/25/2021; the licensee was verbally provided with a correction deadline during the inspection.

2.75(b)(1)

Records: Dealers and exhibitors.

The licensee does not have complete records for acquisition and disposition of animals and many sections of the records were not understandable. There are instances where goats were noted to be sold more than once and it was unclear whether dates listed referred to the date born or date sold. The record of animals on hand did not match the inventory of five goats on the premises.

Records containing the required information for animals disposed of or acquired for use in regulated activities, including those offspring born on premise, are necessary in order to accurately track animals being used in regulated activities to ensure their humane care and use. The licensee shall make, keep and maintain records of acquisition and disposition of all animals that fully and correctly disclose the required information.

To be corrected by 07/07/2021

3.125(a)

Facilities, general.

-In an enclosure containing four camels, there are several long, detached strands of fencing wire that are laying in the pasture.

-In an enclosure containing one llama, there is a shelter structure with sharp nails protruding from the ceiling into the interior. In addition, the sheet metal comprising the walls of the shelter has deteriorated along the bottom, creating sharp edges.

Fences in disrepair can allow the animals to escape. Loose wire and sharp points and edges pose a hazard for the

Inspection Report

animals. All enclosures must be constructed and maintained in a manner to prevent injury and to contain the animals.

To be corrected by 06/30/2021

3.129

Feeding.

-In the feed storage structure there is an uncovered sack that contains the alfalfa pellets for four camels, five goats, one llama and five alpacas. At the time of the inspection, moths were present inside the sack and in contact with the feed.

-In the goat pen, containing five goats, there is a food receptacle with an accumulation of old, caked feed underneath fresh feed.

Improper storage and inadequate cleaning to remove old food can cause molding or contamination, impacting the quality of fresh feed, which can cause illness in the animals.

Adequate measures shall be taken to keep food wholesome, palatable and free from contamination and to prevent molding, deterioration or caking of food.

To be corrected by 6/25/2021

3.130

Watering.

In an enclosure containing four camels, there are two water receptacles, both of which have a coating of brownish green film on all interior surfaces and contain cloudy water. Contaminated water can cause illness or be unpalatable to animals.

All water receptacles must be kept clean and sanitary.

To be corrected 06/25/2021

3.131(a)

Sanitation.

Inspection Report

In an enclosure housing four camels, the pen and both shelter structures had an excessive accumulation of dried and fresh feces, covering over 75% of the areas. Feces accumulation attracts pests and increases the likelihood of disease for the animals. Excreta must be removed as often as necessary to prevent contamination of the animals, minimize disease hazards and reduce odors.

To be corrected by 06/25/2021

This inspection and exit interview were conducted with a facility representative.
