Type: ROUTINE INSPECTION
Date: 30-JUN-2014

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Adult, female Shih Tzu with chip number 091 579 554 ("Ginger") has some thick white colored discharge adhering to the surface of the left eye. There is dark colored discharge that has dried around the lids of the eye. The surface of the left eye appears dry and uneven in some areas. The licensee reports that the attending veterinarian evaluated this dog a "couple of years" ago and she has been treating the eye since that time with ointment. The licensee does not have written directions for treatment available for this dog from the veterinarian. Eye problems can be caused by infection, trauma, many other medical problems and can be painful. These symptoms are consistent with an ongoing medical problem that is not being controlled with the treatment currently being provided. The licensee must have this animal examined by a licensed veterinarian by 3 July 2014 in order to ensure that an accurate diagnosis is obtained and that an appropriate treatment plan is developed and followed. The licensee must document the outcome of this consultation and make it available to the inspector upon request.

There is a bottle of "Baytril" tablets that does not have directions for use from a licensed veterinarian or an expiration date. There is a bottle of metronidazole 250 mg tablets that does not have directions for use from a licensed veterinarian. There was also a bottle of unidentifiable pills with no expiration date. All of these medication are being stored in the treatment area of the whelping building. Lack of proper labeling of medications (including lack of directions for use) can result in medications being used incorrectly, prolonged medical problems, undesired side effects, and the use of expired medication. The licensee must ensure that all medications used in the facility are not expired and are labeled properly in accordance with standard veterinary practices. To be corrected by 14 July 2014.

2.50(a)

TIME AND METHOD OF IDENTIFICATION.

There are two dogs (a 7 month old Maltese and a 3 month old Shih Tzu) being housed together in an enclosure in the whelping building. Neither of these dogs have correct identification. Proper identification and record keeping are essential for tracking movement of animals and to facilitate the inspection process. Licensee must identify all live
