Type: ROUTINE INSPECTION
Date: 17-MAY-2017

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

The written program of veterinary care (PVC) states that the three wolf-dogs are to receive treatment two times per year with two different worming agents for intestinal parasites. There were no records available during the time of inspection showing that this procedure had been done. Failure to follow the program of veterinary care or other directions from the attending veterinarian can result in a variety of medical problems with the animals. Licensee must use appropriate methods to control, diagnose and treat diseases and injuries as directed by the attending veterinarian.

To be corrected by: Next inspection

3.125(a)

FACILITIES, GENERAL.

The cyclone fencing along the bottom on the right side of the enclosure housing one adult goat named "Doodles" has several areas where the wires are bent and broken with sharp edges protruding towards the animal. These bent and broken wires with sharp edges could potentially cause an injury to the animal. The wood shelter in the enclosure housing one adult goat named "Doodles" has a hole along the left side. The roof has several areas where it is chewed with rough, splintering edges and not in good repair. Licensee must maintain housing facilities in good repair so that it protects the animals from injuries.

To be corrected by: May 24, 2017

Inspection conducted with a facility representative. An exit briefing was conducted with the licensee.
