PULLMAN, WA 99164

Customer ID: **1026**
Certificate: **91-R-0002**
Site: 002
Vancouver Campus

Type: ROUTINE INSPECTION
Date: 12-JUN-2023

2.33(b)(3) Critical

Attending veterinarian and adequate veterinary care.

After a severe weather event, a 1-year-old male fruit bat was found dead on 12/24/2022. Due to the icy conditions, staff was unable to safely access the campus to care for the animals on 12/23/2022. Upon access to the facility, staff found the food containers in both animal rooms had run out. They also noted that the dead bat was found in the water pan.

Daily observation of all animals to assess their health and well-being is required so that timely and accurate information is conveyed to the attending veterinarian.

The research facility has implemented corrective actions. The contingency plan was revised to better address this specific scenario, and the emergency alert list for the campus was expanded. Additionally, as the dead bat was found in the water pan, a climbing platform is now available in all water pans to assist the animals, if needed.

Corrected prior to the inspection.

This inspection and exit interview were conducted with the facility representatives.

Additional Inspectors:

Vacant Alger 2 (Hallberg)
