OUTDOOR HOUSING FACILITIES.

All lemurs have shelter from the sun, wind and rain however there are no heaters in the shelters.. Heaters are available for the lemurs but have not yet been placed in shelters. Night time temperatures are predicted for the lower 40's /upper 30's . Lemurs are a species that may experience discomfort and health issues such as frost bite when temperatures fall into this range and lower. The shelter must safely provide heat to the non human primates to prevent the ambient temperatures from falling below 45 degrees unless directed by the attending veterinarian to prevent discomfort. CORRECT BY : From This Date Forward

3.130

WATERING.

At time of the inspection ,the water receptacle for the 2 kinkajous housed in the raised floor enclosure contained no water. The bowl was dry. Licensee stated these animals frequently knock over the water bowl but are offered water 2 - 3 times per day . Water was provided to these animals at inspectors request and they both were observed drinking for several minutes. Frequent access to water is necessary for the health and well being of the animals. A method must be developed to prevent the animals from knocking the water bowl over so that water can be provided for the health and comfort of these animals. CORRECT : From This Date Forward

Note : The issue with veterinary care for the 2 kinkajou and 4 coatimundi noted on the inspection dated 10/18/17 have been corrected.

The inspection and exit briefing was conducted with the owner.
