GREEN OAK RANCH MINISTRIES, INC.

Type: ROUTINE INSPECTION

Date: 20-MAR-2017

2.40(b)(3)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

At the time of inspection, the facility identified that Bobby, a ten plus year old male bobcat, had not been eating well recently. The veterinarian had evaluated Bobby on February 8, 2017 for vomiting, diarrhea and a swelling on the right shoulder area, and it was documented in the records at the facility. The vomiting and diarrhea had resolved, and on February 22, it was recorded that Bobby was not eating. The facility spoke with the vet, and the vet re-evaluated Bobby on March 8th. The written records were not available at the facility, but the vet recommended grinding food, offering cat food or other appealing foods in order to tempt Bobby to eat, and consulted with another vet with bobcat experience. The Inspector called the vet regarding Bobby on the day of inspection, and the vet was concerned with the significant weight loss and the prominence of the swelling on the right shoulder seen on March 8th. Since March 8th, Bobby has continued to eat only a few bites of food daily and the facility needs to communicate with the veterinarian that he has not improved and continues to lose weight.

The exhibitor must ensure that all animals are observed every day, and that any problems or signs of decline are reported to the attending veterinarian, so that appropriate diagnostics and care can be provided. Bobby the bobcat must be re-evaluated by a veterinarian for the shoulder swelling/weight loss by March 25, 2017, and daily observation of all animals, with appropriate follow-up and communication to the veterinarian, should be conducted from this time forward.

Exit interview conducted with facility representative.
