Type: ROUTINE INSPECTION
Date: 25-JUN-2025

2.40(b)(3) Direct

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

One dog has been identified at the facility as requiring veterinary care. The facility had not identified the dental issue prior to the inspection.

A light brown female Maltipoo (microchip #7857) that is approximately 4.5 years old has gum recession and loose teeth on the upper jaw. Multiple teeth are mobile when minimal pressure applied and there are multiple teeth missing. This issue was identified while performing the physical examination of the dog when the inspector observed movement in the teeth with minimum pressure applied to the teeth and gums.

Failure to conduct adequate daily observations to assess the health and well-being of the dogs with direct and frequent communication to the attending veterinarian can delay treatment and increase severity of health conditions.

The facility contacted the veterinarian at the time of inspection and scheduled an appointment for 3:00 PM on 25-June-2025.

Correct by ensuring that the animal listed above, and the condition of the animal are reported to the attending veterinarian so that the animals can be properly examined, diagnosed, and treated. Additionally, ensure that daily observation of animals is adequate to identify any signs of poor health. Ensure that there is accurate and timely communication of problems of animal health, behavior, and well-being conveyed to the attending veterinarian. Correct by 5:00 PM, 26-June-2025

This inspection and exit interview were conducted with the Facility Representative.
