15672 South Avenue 1 E
Yuma, AZ 85365

Customer ID: **3826**
Certificate: **86-C-0102**
Site: 001
TERRILL AL-SAIHATI

Type: ROUTINE INSPECTION
Date: 06-FEB-2018

2.40(b)(2) DIRECT REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

One brown and black, adult, female sheep was observed to be excessively thin, with protruding hip bones, spine, and ribs. The bones of her spine, hips, and each rib were easily felt by both APHIS inspectors upon palpation. She had a rough, unthirfty hair coat with multiple patches of hair loss along her back and right and left sides. She also had overgrown toes on her right front foot. Poor body condition can be an indication of health issues, including parasitism, poor dentition, malnutrition, and systemic disease.

The facility must ensure that all animals showing potential signs of veterinary medical problems are evaluated by a veterinarian in a timely manner in order to receive an accurate diagnosis and appropriate treatment plan. Additionally, the facility must ensure the availability of emergency, weekend, and appropriate holiday care for all of the animals at the facility. The animal mentioned above must be examined by a veterinarian to obtain accurate diagnosis and appropriate treatment plans for the problem cited above. The licensee must ensure that all animals at the facility are provided with adequate veterinary care, as described by the attending veterinarian and the program of veterinary care. The program for providing adequate veterinary care shall include the use of appropriate methods to prevent, control, diagnose, and treat diseases and injuries.

3.130 DIRECT

WATERING.

A lactating, adult female camel, "Camela," and her nursing baby did not have access to drinking water. The water receptacle had a hole in the bottom of the bowl and the hose leading to it was broken. The facility representative was unaware when the water was turned off for these animals; he believes it was turned off the evening of February 5th. When the facility representative provided water for this camel, she was drinking and searching for water sources for approximately 8 minutes (with approximately 4 minutes of it being filmed). Lack of adequate water intake can lead to dehydration and other health issues.

If potable water is not accessible to the animals at all times, it must be provided as often as necessary for the health and comfort of the animal. Frequency of watering shall consider age, species, condition, size, and type of the animal.
