CALHAN, CO 80808

Customer ID: **330542**  
Certificate: **84-C-0152**  
Site: 001  
Wishing Star Farm L L C

Type: ROUTINE INSPECTION  
Date: 21-JUL-2021

---

### 3.56(a)(1)

#### Sanitation.

Inside the barn the two rabbit cages, each housing one rabbit, has an excess accumulation of feces inside and under the cages. Both cages have excess debris accumulating on the cage wires. There is dried and smeared brown substance on the pieces of wood inside the cages. Bacteria and fungus may grow in the excessive debris and feces and cause the animals to become ill. Rabbit cages should be kept reasonably free of feces and fur to prevent exposure of the animals to potential disease. The cages must be thoroughly cleaned (inside and outside) as needed to prevent the build-up fur, and other debris. Feces must be removed and disposed of properly to ensure animals are in a clean environment and not exposed to vermin or other disease hazards.

To be corrected by: July 22, 2021

### 3.125(a)

#### Facilities, general.

In goat pen 1, containing 3 goats, there is boards missing along the front of the shelter. Where the boards are missing there is 5 exposed nail heads protruding outward towards the animals. The exposed nail heads pose a hazard to the animals. All enclosures must be constructed and maintained in good repair to protect the animals from injury.

To be corrected by: July 22, 2021

## Inspection Report

---

### Watering.

The water receptacle in goat pen 2, containing 5 goats, has a coating of green film on the interior surface. The water is greenish brown with plant material and debris floating on the surface and inside the water. Contaminated water can cause illness and be unpalatable to animals. All water receptacles must be kept clean and sanitary.

To be corrected by: July 22, 2021

This inspection and exit interview were conducted with a facility representative.
