Certificate: **42-C-0084**
Site: 001
THOMAS & PAMELA SELLNER

Type: ROUTINE INSPECTION
Date: 29-OCT-2018

3.75(a)

HOUSING FACILITIES, GENERAL.

1. In the outdoor macaque enclosure, the primate building has a section of jagged, sharp sheet metal within reach of the animals. This area is located below the wire tunnel connecting the indoor and outdoor portions of the enclosure. The sharp metal could potentially injure the animals.

Repair or replace this area of the building.

To be corrected: 11-12-18

2. In the enclosure containing the single baboon, several 4x4 posts along the two solid walls are damaged or broken near the ground. Additionally, a board is broken on the bottom of one wall creating a gap beneath it. This wall is shared with the adjoining macaque enclosure. A large stone is in place to block part of the gap but the potential for animals from either side to reach through exists and could lead to injury.

Ensure these areas are structurally sound to prevent contact between the animals.

To be corrected: 11-12-18

This inspection and exit interview were conducted with the owner.

Additional Inspectors

Welch Scott, Veterinary Medical Officer

Prepared By: MOORE CHAD, A C I USDA, APHIS, Animal Care
