Post Office Box 37
Clay Center, KS 67432

Customer ID: **4099**
Certificate: **48-C-0017**
Site: 001
City of Clay Center

Type: ROUTINE INSPECTION
Date: 24-AUG-2016

2.40(b)(3) REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

A female bobcat with a history of weight loss has a notation in the keeper records on 9 June 2016 that she was "eating noticeably less in the last few days". The keeper told inspectors that this decrease in appetite started approximately three days before the 9th but there are no notations in the keeper records between 1 June and 9 June 2016. Records show that the attending veterinarian (AV) was consulted (while keeper was picking up medications at his office) on this day (9 June) and he instructed the keeper staff to try offering the animal a wider variety of food. Keeper notes show that the bobcat was offered a variety of food on 10 June 2016 but no mention of whether the animal did eat the food offered.

There were no notations in the keeper records for 11 and 12 June 2016. The keeper record had a notation for 13 June 2016 (Monday) stating that the animal "looked like" she had eaten some food over the weekend but that no feces were found in the enclosure over the weekend.

The notation in the keeper record for 14 June 2016 states that the bobcat had not eaten any food offered the day before and appeared weak. The AV was not contacted again until 14 June 2016 and an appointment was scheduled for the afternoon of the next day. There was no communication regarding this bobcat with the AV documented before 9 June or from 10 June until 14 June 2016 despite the deteriorating condition of the animal. The animal was euthanized at 3pm on 15 June 2016 due to progressing weakness, not eating, and presumed kidney failure.

Daily observation and direct, frequent communication with the attending veterinarian is essential for the health care of the animals. The licensee must observe animals daily to assess their health and well-being and establish as part of the program of veterinary care, a mechanism of direct and frequent communication so that timely and accurate information on problems of animal health, behavior and well-being are conveyed to the attending veterinarian.

Inspection Report

RECORDS: DEALERS AND EXHIBITORS.

The facility transported three white-tailed deer to give to a private individual on 2 June 2016 but does not have any information documenting the name and address of the person to whom the animal was sold or given. Correct documentation is necessary to facilitate the inspection process and to track the movement of animals. The licensee must make, keep, and maintain records which fully and correctly disclose information concerning animals other than dogs or cats, purchased or otherwise acquired, owned, held, leased, or otherwise under his or her possession or under his or her control or which is transported, sold, or euthanized, or otherwise disposed of by the dealer or exhibitor. This information includes the name and address of the person to whom the animals are sold or given. To be corrected with the next animal transaction.

3.9(b)

FEEDING.

The food for the three wolf-dog hybrids is being placed directly on the concrete floor of their enclosure. Food placed on the enclosure floor may become contaminated. Food receptacles must be used for the food of dogs and must be located to protect the food from contamination. Correct by 27 Aug. 2016.

The inspector completed this inspection report when Animal Care was transitioning to a new information management system. Because the inspector re-typed the inspection report into the new system when it was deployed, the "prepared by" date on this inspection report is different than the date the inspector prepared the original inspection report, which occurred on 24 August 2016.

This inspection and exit interview were conducted with facility representatives.

Additional Inspectors

Lundy Kendall, Animal Care Inspector
