Type: ROUTINE INSPECTION  
Date: 15-AUG-2017

### 3.78(d)

#### OUTDOOR HOUSING FACILITIES.

There is not a sufficient perimeter fence around the enclosure housing ring-tailed lemurs. Lack of perimeter fence does not protect the animals by restricting unwanted animals and unauthorized persons from having contact with the animals housed at the facility. Also, without a perimeter fence there is no secondary containment system. A six foot high perimeter fence must be provided for this enclosures to keep unauthorized people and animals from coming in contact with the animals on exhibit and provide a secondary containment system in the event of an escape.

Correct By: November 15, 2017

### 3.125(a)

#### FACILITIES, GENERAL.

The enclosure that is located in the center of the zoo and is housing camels and llamas has damage to the bottom of the wire fencing on the south, east, and west side. It has become loose and is curled up and bent into the enclosure. Also, on the north side of the same enclosure the top of the wire fencing is damaged, it is loose and has bent wires with broken ends and sharp points. Enclosures that are not properly maintained could allow animals to escape or cause injury. Enclosures must be maintained so that they are structurally sound and free of sharp points, broken ends, and loose wires.

Correct By: September 15, 2017

### 3.127(d)

#### FACILITIES, OUTDOOR.

The enclosure housing the coatimundis is lacking a perimeter fence on the north, west, and east sides. There is a building that is adequate to serve as a perimeter fence on the south side of the enclosure. Lack of perimeter fence does not protect the animals by restricting unwanted animals and unauthorized persons from having contact with
