### **Sheltered housing facilities.**

The outdoor area of a sheltered housing facility containing two adult white-throated capuchin monkeys is not completely enclosed by a perimeter fence. The outdoor area of the enclosure has chain link walls and roof, beyond which there is perimeter fencing. However, the perimeter fence is not complete- it contains a gap approximately 6-feet long near the east side of the monkey enclosure where perimeter fencing has not yet been installed. A perimeter fence is essential for preventing contact between exotic animals and unauthorized people or animals. A perimeter fence also acts as a secondary containment system in the event an animal escapes from its primary enclosure. Correct by installing a perimeter fence that is at least 6 feet tall around the outdoor area of the primate enclosure, or by obtaining approval from the Administrator for alternative measures.

This inspection and exit interview were conducted with the owner.
