Type: ROUTINE INSPECTION
Date: 29-NOV-2022

3.75(a) Repeat

Housing facilities, general.

A baby ring-tailed was able to escape the primary enclosure for the troop of 7 lemurs.

Primary enclosures must be designed and constructed of suitable materials so that they are structurally sound for the species of nonhuman primates contained in them. They must be kept in good repair and contain the nonhuman primates securely.

All primary enclosures for non-human primates must designed, constructed and maintained to contain the non-human primates securely to prevent injury or death to the animals.

3.80(a)(1)

Primary enclosures.

While inspecting the shelter for the baboon the inspectors forefoot went through the floor of the shelter.

Primary enclosures must be designed and constructed of suitable materials so that they are structurally sound for the species of nonhuman primates contained in them. They must be kept in good repair.

Enclosures for non-human primates must designed and constructed of suitable materials, and maintained in good repair to prevent escape, injury, or death of the non-human primate contained.

Corrected at time of inspection.

3.125(a) Repeat

Inspection Report

Facilities, general.

The shelter for the two coyotes that are housed together has sharp points on the metal flashing below the roof shingles.

The indoor and outdoor housing facilities shall be structurally sound and shall be maintained in good repair to protect the animals from injury.

All housing facilities for animals must be constructed and maintained in good repair to prevent sharp points that can cause injury to the animal contained. This non-compliant item was corrected at time of inspection.

3.127(c)

Repeat

Facilities, outdoor.

The primary enclosure for the Asiatic water buffalo and Highlander cow has excessive mud. The animals do not have access to water, food and shelter without going through the mud. The shelter for these two animals also has mud in it.

A suitable method shall be provided to rapidly eliminate excess water.

Primary enclosures for animals must have a method to eliminate excess water to provide dry access to food, water and shelter for the animals contained.

3.128

Space requirements.

The female coati, acquired November 23rd, is housed in a wire kennel approximately 30" X 36". This enclosure is kept right next to a larger coati enclosure housing 6 coati all together. The newly acquired female coati is displaying abnormal behavior. She rapidly weaves back in forth behind one of the short enclosure sides. The bedding and hay has been pushed aside in this area due to her weaving. Her repeated movement has created a bare area of enclosure floor that is also wet. This repetitive, invariant behavior pattern with no obvious goal or function is often indicative of insufficient space and/or environment. The coati's display of stereotypy can also be evidence of stress. Enclosures shall be constructed and maintained so as to provide sufficient space to allow each animal to make normal postural and social adjustments with adequate freedom of movement. Inadequate space may be indicated by evidence of malnutrition, poor condition, debility,
