

## Inspection Report

New Mexico Wildlife Association  
P. O. Box 1359  
Edgewood, NM 87015

Customer ID: 3754  
Certificate: 85-C-0015  
Site: 001

NEW MEXICO WILDLIFE ASSOC.

Type: ROUTINE INSPECTION  
Date: 01-DEC-2015

### 2.40(b)(3)

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

2.40 (b) (3) The older female Pronghorn antelope has excess hair loss along both the right and left side from behind the front legs to the hips. In several areas where the hair is missing, the exposed skin is thickened and has a dark pigmentation. Animal caretaker stated that the younger female pronghorn was excessively mounting the older female which could potentially be stressful for this animal. These two female pronghorns need to be evaluated by the attending veterinarian in order to determine if there is a medical and/or behavioral problem with the excess mounting and hair loss. Ensure that a mechanism of direct and frequent communication is accomplished so that timely and accurate information on problems of animal health, behavior, and well-being is conveyed to the attending veterinarian.

To be corrected: December 14, 2015

### 3.125(a) REPEAT

#### FACILITIES, GENERAL.

3.125 (a) Structural Strength. Along the southwest side of the enclosure housing 1 adult coyote named "Wiley", the innermost layer of fencing is curled upward with broken sharp edges. The broken wire with the sharp edges could potentially cause an injury to the animal. Construct and maintain all facilities so that they are structurally sound and in good repair to protect the animals from injuries.

Inspection accompanied by Jeanne Kjos, VMO, USDA, APHIS, AC and facility representative. An exit briefing was conducted with a facility representative.

#### Additional Inspectors

Kjos Jeanne, Veterinary Medical Officer

Prepared By: CINDY RHODES, A C I USDA, APHIS, Animal Care
