Type: ROUTINE INSPECTION
Date: 15-NOV-2017

2.40(b)(2) DIRECT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Female Shih tzu ("Mercury", microchip # A02333001) has an emaciated body condition. A physical inspection of the dog revealed the hips, backbone, ribs and shoulder blades are prominent and easily felt beneath the hair coat and there is little to no body fat and muscle covering the animal. Although the dog has a long hair coat, the inspector was able to visibly see the dog's poor body condition while she was standing in her enclosure. This dog is currently nursing six puppies. The dog has not been evaluated by a licensed veterinarian for her body condition.

Female Poodle (microchip #036-010-303) has an emaciated body condition. A physical inspection of the dog revealed the hips, backbone, ribs and shoulder blades are prominent and easily felt beneath the hair coat and there is little body fat and muscle covering the animal. The dog appears depressed and lethargic and has not been evaluated by a licensed veterinarian for her body condition.

An emaciated body condition could be an indicator of a serious underlying health issue. These dogs must be evaluated by a licensed veterinarian for a proper diagnosis and to establish an effective treatment plan.

Correction date: Both dogs were transported to a licensed veterinarian at the time of the inspection.

3.1(a)

HOUSING FACILITIES, GENERAL.

In at least four enclosures, housing a total of four adult dogs and approximately 18 puppies, the heat lamps are placed at the level of the dogs and do not have any guards to stop the dogs from touching the glass bulbs. Without the protective guards, the dogs can come into direct contact with the glass bulb which could cause burns or injuries.

Housing facilities for dogs must be designed so that they protect the animals from injury. The licensee must remove the glass bulbs from within the enclosures or cover the bulbs with a protective guard in order to ensure the animals cannot come into direct contact with the bulbs. The licensee must ensure that all enclosures are safe for the dogs

Inspection Report

at all times.

Correction date: The heat lamps were removed from all enclosures at the time of the inspection.

3.6(a)(2)(x)

PRIMARY ENCLOSURES.

In at least five enclosures, housing approximately twenty-three puppies, the feet and legs of the puppies are passing through the wire flooring. Openings in flooring that are large enough for feet and legs to pass through could result in entrapment or injury to the puppy.

Enclosures must have floors that are constructed in a manner that protects the dogs' feet and legs from injury and does not allow the dogs' feet to pass through any openings in the floor. The licensee must alter the flooring in a manner that does not allow the feet and legs of the puppies to pass through any openings. The licensee must ensure that the flooring in the enclosures is safe for the dogs at all times.

Correction date: November 25, 2017

Inspection conducted with Kelly Maxwell, ACI, an IDALS Official, and the facility representative.

Exit interview conducted with Kelly Maxwell, ACI and the facility representative.
