Type: ROUTINE INSPECTION
Date: 24-NOV-2015

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

There were many expired medications present at the facility today . These included wormers, Albon and antibiotic spray. Outdated medications may not be effective or potent if used past the expiration date. Proper veterinary care and treatment includes the use of drugs and medications that are not expired. Expired medications must be removed from in date supplies and only drugs/medications used that are within date.

CORRECTED DURING INSPECTION

3.75(c)

HOUSING FACILITIES, GENERAL.

The top of the shelter box for the bushbabies is caked with body oil , food waste and excreta . The wooden ladder in the brown lemur enclosure is also stained with body oil. Hard surfaces which non human primates come in contact with must be spot cleaned daily and sanitized to prevent accumulation of excreta to prevent disease hazards.

CORRECT BY : 12/1/15

3.78(b)

OUTDOOR HOUSING FACILITIES.

The lemurs and bushbabies are housed in outdoor enclosures . There are no windbreaks on the sides of the enclosures and many of the shelter boxes are facing toward the north .There are no heaters in any shelter boxes for non human primates this date. The tarp covering half the top of the brown lemur enclosure is torn.Outdoor housing for non human primates must provide adequate shelter at all times. The shelter must safely provide heat to the non human primates to prevent the ambient temperature from falling below 45 degrees except as directed by the attending veterinarian and in accordance with generally accepted professional and husbandry practices. Inclement weather is predicted in the next 24 - 48 hours and all outdoor housed non human primates must be provided with adequate shelter that will maintain temperature as described.

CORRECT BY : 11-26-15

3.82(d)

Inspection Report

FEEDING.

There are feces mixed with primate biscuits in the feeder in the brown lemur enclosure. One food bowl for the bushbabies contains dried food and feces. Food and food receptacles must be located to minimize the risk of contamination by excreta. They must be kept clean and sanitized to provide proper husbandry for the animals.
CORRECT BY : 11/25/15

3.125(a)

FACILITIES, GENERAL.

The heat lamp for the 2 prehensile tailed porcupine is inside the enclosure. The cord extends into the enclosure and may be contacted by the animals. There is concern that the location of the heat lamp and the cord may result in injury to the animals if the cord is chewed. All heat lamps must be placed in safe locations out of reach by the animals to prevent injury.
CORRECT BY : 11/25/15

3.127(b)

FACILITIES, OUTDOOR.

The newly acquired 5 coatimundis only have transport kennels for shelter. These kennels have slats on the side and do not provide adequate protection from wind, rain and cold weather. There are no wind breaks for any of the enclosures housing the kinkajous or other coatimundis at this facility and most of the shelter boxes face toward the north. Cold wet weather is predicted. All animals housed outside shall be provided with appropriate shelter to protect them and prevent discomfort from the elements.
CORRECT BY : 11-25-15

3.131(a)

SANITATION.

One kinkajou enclosure housing 2 kinkajous has a build up of feces and debris on the wire floor. The outside of the shelter box and a PVC climbing tube within the enclosure are caked with old food and body oil. Excreta must be cleaned as often as necessary to prevent contamination to reduce disease hazards.
CORRECT BY : 11/26/15

The inspection and exit briefing was conducted with the owner.

NOTE : This was an inspection of a new site. All items must be in compliance at the new site for the site to be a valid site for covered activities (sales).
