Certificate: **64-C-0221**
Site: 001
SHELBY & AMY RAINEY

Type: ROUTINE INSPECTION
Date: 27-MAR-2017

3.56(b)(1) REPEAT

SANITATION.

** The wood surfaces of the rabbits primary enclosures had white spots in some areas, a greenish stain in another and some areas appeared darker than others where they had been soiled. These surfaces need to be cleaned and/or sanitized. If the surface is no longer able to be sanitized then it needs to be repaired and/or replaced to minimize disease. Primary enclosures for rabbits shall be sanitized at least once every 30 days by washing all soiled surfaces with a detergent solution followed by a safe and effective disinfectant.

3.125(a)

FACILITIES, GENERAL.

** The wire paneling on the goats primary enclosure was peeling away from the wood with pointy ends. This wire could potentially harm the animals contained within. The facility must be constructed of such material and of such strength as appropriate for the animals involved. The indoor and outdoor housing facilities shall be structurally sound and shall be maintained in good repair to protect the animals from injury. Correct by 4/15/2017.

This inspection and exit interview were conducted with owner.
