Type: ROUTINE INSPECTION
Date: 09-JUL-2019

2.40(b)(2) DIRECT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

***A litter of eight Weimaraner puppies born on 06/04/19 were undersized for their age and underweight. They were lethargic and had many ticks on them. All of the puppies were thin with three of the puppies having visible ribs and hip bones. One of these puppies was extremely weak, had difficulty standing, and had visible shoulder and vertebral bones. The puppies were housed in an outdoor enclosure. The puppies had not received any type of supplemental nutrition or husbandry. A veterinarian had not been consulted about their condition. Appropriate veterinary care is necessary to prevent, control, diagnose, and treat disease, malnutrition, and parasites.

***An adult female Weimaraner named "Daisy" (m/c 941000014976966) had ticks covering most of its body. Many of the ticks were engorged. A veterinarian had not been consulted about treating and controlling this severe parasite problem.

The licensee must take the three thinnest puppies to a veterinarian on July 09, 2019 for diagnosis and follow the treatment plan for all eight puppies. The licensee must consult a veterinarian regarding appropriate external parasite control for the adult dog by July 10, 2019.

2.75(a)(1)

RECORDS: DEALERS AND EXHIBITORS.

All of the dogs listed on the Record of Acquisition for dogs on hand (APHIS form 7005) were missing the information for the name and address of the persons from whom the dogs were acquired, the age or date of birth, the date acquired, and a description of the dog. Complete information on this form is necessary for identification and tracing purposes. The licensee shall ensure that this form is complete and up to date at all times.

To be corrected by July 30, 2019.

3.4(a)(1)(iii) DIRECT

OUTDOOR HOUSING FACILITIES.

A litter of eight Weimaraner puppies born on June 04, 2019, were whelped and maintained in an outdoor enclosure.

Inspection Report

All eight puppies were undersized and underweight, with one puppy being so weak it had trouble standing and walking. The ambient temperature at the time of the inspection was 92 degrees F. The puppies were lethargic, moved very little, and were panting. The Attending Veterinarian had written "N/A" on the licensee's Program of Veterinary Care under Non-Climate Control Whelping. Young and sick puppies have difficulty acclimating to temperature extremes. The licensee must ensure that sick, infirm, aged, and young dogs are not housed outdoors unless the practice is specifically approved by the Attending Veterinarian.

These dogs must be moved to a climate-controlled building on July 09, 2019.

3.11(c)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

There were excessively tall weeds and grasses in the enclosures for the Weimaraners and Bernese Mtn. Dogs. Tall weeds and grasses provide habitat for pests such as ticks, fleas, and snakes. The licensee must ensure that weeds and grasses are controlled so as to facilitate cleaning of the premises and pest control.

To be corrected by July 10, 2019.

3.11(d)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

An adult female Weimaraner had ticks covering most of its body. A litter of eight Weimaraner puppies had ticks on their abdomens and chests. Ticks can result in anemia and can carry diseases that can affect the health of the dogs. The licensee must establish an effective pest control program for the dogs and for the premises.

To be corrected by July 19, 2019.

This inspection and exit interview were conducted with the licensee.
