PEACEABLE KINGDOM

Type: ROUTINE INSPECTION
Date: 13-JAN-2015

2.78(a)

HEALTH CERTIFICATION AND IDENTIFICATION.

Section 2.78(a) Health certification: The owner transported her marmoset from New York to Pennsylvania on December 1, 2014 without a health certificate. Health certificates are required before transporting nonhuman primates across state lines to ensure that the animals appear to the licensed veterinarian to be free of any infectious disease or physical abnormality which would endanger the nonhuman primate(s) or other animals or endanger public health. An exhibitor must not transport any nonhuman primate in commerce unless accompanied by a health certificate issued by a licensed veterinarian no more than 10 days prior to the transport.

Correct from this day forward.

3.53(a)(1)

PRIMARY ENCLOSURES.

Section 3.53(a)(1) Primary enclosures: Two rabbits are housed in an outdoor enclosure with a large tarp covering the back portion of the enclosure and their igloo shelter. The owner informed the APHIS official that the tarp was being used as a windbreak. The rabbits are using the tarp to climb up onto an elevated platform inside the enclosure. The rabbits may fall and be injured climbing on the tarp, especially during wet/icy conditions. Also the rabbits may chew and ingest portions of the tarp and become ill. During the inspection the owner removed the tarp from the enclosure. Rabbit enclosures must not contain items that may be harmful for the rabbits, must be structurally sound and must be maintain in good repair to protect the animals from injury.

Correct from this day forward.

3.125(a)

FACILITIES, GENERAL.

Section 3.125(a) Structural strength: The following enclosures must be repaired.

Inspection Report

1) The enclosure housing 2 Patagonian caviars (in the brown barn to the left of the door) has two holes in the wood walls in the lower back left corner. The caviars may get wood splinters and/or injured, especially if they try to chew or scratch at the holes. The wood walls must be repaired or replaced to protect the animals from injury.

2) The enclosure housing 3 raccoons in the brown barn has a back metal panel with areas of excessive rust. The lower edge of the metal panel has rusted through creating a hole and sharp edges above the floor. The raccoons may get cut on the sharp rusted edges, especially if they try to put their nose or paw through the hole. The rusted metal panel must be repaired or replaced to protect the animals from injury and to allow adequate cleaning.

Facilities must be constructed of such material and of such strength as appropriate for the animals involved. Housing facilities must be structurally sound and maintained in good repair to protect the animals from injury and to contain the animals.

Correct both items by January 20, 2015.

3.131(c) REPEAT

SANITATION.

Section 3.131(c) Housekeeping: Wood, old enclosures and miscellaneous items are still stored around the animal enclosures and buildings. The clutter around the animal areas provides good hiding places for mammalian pests and prevents vegetation from being cut/trimmed around enclosure fencing. Animals may be injured when walking through these areas to move to other enclosures or into the transport trailer. Animal areas must be free of clutter and debris to deter pests and for the safety of the animals.

An exit briefing was conducted with the owner.
