Site: 001

SIERRA NEVADA ZOOLOGICAL  
SOCIETY

Type: FOCUSED INSPECTION

Date: 17-DEC-2019

---

### 3.75(c)(3)

#### Housing facilities, general.

There was an excessive accumulation of food waste present in and just outside the baboon enclosure during inspection. Some of the cut up bananas or discarded banana peels were dark brown and appeared slimy, and the food debris creates a disease hazard. According to the facility manager, the enclosure is cleaned every three days, and the employee responsible called out on the day of inspection. Hard surfaces must be spot-cleaned daily in all housing facilities and all other surfaces must be cleaned and sanitized when necessary to satisfy generally accepted husbandry standards and practices. Excessive food waste that accumulates for multiple days attracts vermin and creates a disease hazard for the baboons in the enclosure, and does not meet generally accepted husbandry practices.

Correct by 31 December, 2019

This inspection and exit interview were conducted with the facility manager.
