SALK INSTITUTE FOR BIOLOGICAL STUDIES

Type: ROUTINE INSPECTION

Date: 30-JUN-2016

2.36(b)(5)

ANNUAL REPORT.

The annual report provided to USDA for fiscal year 2015 did not include Rabbits, and indicate only 1 ferret was used on a research protocol. The inspection inventory from 17 September, 2015 reported rabbits on hand, and the facility records indicated that more than one ferret was utilized during fiscal year 2015. A facility representative stated that there had been personnel changes in recent past that may have resulted in this discrepancy. Current animal numbers are being kept by the attending veterinarian and they are currently exploring multiple options for future back-up systems to ensure that numbers are checked and remain accurate. Numbers of animals must be accurately kept and reported on the annual report in order to ensure proper regulatory oversight by and communication with USDA.

Correct by ensuring that numbers of animals used in regulated activities are accurate from this point forward, and by submitting an amended report for the fiscal year 2015 to the regional office.

Correction date 21 July, 2016

3.80(a)(2)(1)

PRIMARY ENCLOSURES.

Several marmoset enclosures contained areas with a plastic coated wire mesh; however in some areas the edges of the wire were left with sharp points, in areas the animals could reach (both inside and outside the enclosure).

Exposed sharp points could injure nonhuman primates. The enclosures must be kept in good repair. Primary enclosures must be constructed and maintained so that they: have no sharp points or edges that could injure the nonhuman primates and protect the nonhuman primates from injury.

Correct by 7 August, 2016

Exit Interview conducted with facility representative .

Accompanied on inspection by Dr. Tyler Fields and Dr. Michael Schnell.
