Hallie Ade
6832 E. Mentor Rd
Gypsum, KS 67448

Customer ID: **12658**
Certificate: **48-A-2111**
Site: 001
Hallie Ade

Type: ROUTINE INSPECTION
Date: 04-MAR-2014

2.75(a)(1)

RECORDS: DEALERS AND EXHIBITORS.

There are at least 4 dogs whose identification numbers were checked during the inspection that were not listed on the dogs on hand form (APHIS form 7005). Proper record keeping is essential for tracking movement of animals and to facilitate the inspection process. Licensee must maintain complete records for review of all dogs or cats purchased or otherwise acquired, owned, held, or otherwise in his or her possession or under his or her control for review. To be corrected by 18 March 2014.

3.1(a) REPEAT

HOUSING FACILITIES, GENERAL.

There is one outdoor enclosure on the north side of the facility housing two dogs with a large hole under the divider fence that leaves a gap between the fence and the ground. This hole appears large enough for a dog to insert its head under the fence. There is also a hole in the dirt under the egress door on the south side of the whelping building leaving a gap under the building. Holes under fences and structures can cause injury to dogs who try to crawl in the space between the fence and the ground. Holes under fences can also allow dogs to escape the enclosure or other animals to gain access to the enclosure.

There is a shredded tarp hanging into an enclosure on the south side of the property housing two dogs. The tarp is shredded on the edges and is within reach of the dogs. There are pieces of the tarp on the ground of the enclosure. The dogs could chew on the tarp leading to injury and intestinal upset.

The licensee must maintain the facility in good repair to protect the animals from injury and to contain the animals securely.

3.4(b)

OUTDOOR HOUSING FACILITIES.

There is an outdoor enclosure on the east side of the facility housing three Labrador retrievers that has insufficient shade. Lack of shade can be uncomfortable for the dogs and in some conditions, cause inability to regulate body temperature. The licensee must provide areas of shade that are large enough to contain all the animals at one time

Inspection Report

and protect them from the direct rays of the sun. This shade must be in addition to shelter structures in the enclosure. To be corrected by 18 March 2014.

3.6(a)(2)(1) REPEAT

PRIMARY ENCLOSURES.

There is a section of a sheet of metal that is ripped and turned inward into an enclosure on the north side of the facility. The resulting metal edge was ragged and appeared sharp. The was in the second enclosure from the west and housed two dogs. There are also multiple protruding screw heads and a small protruding metal edge on the wall of an enclosure housing a Labrador retriever and her puppies. Sharp metal edges or points can cause injury to the dogs. The licensee must maintain all primary enclosures so that they have no sharp points or edges that could injure the dogs.

The inspection and exit interview were conducted with the facility representatives.
