### 3.152(b)

#### Facilities, outdoor

In one of the duck feeding enclosures there was only a mesh shade to diffusely block off the sun. It did not provide adequate or concentrated areas of shade to effectively provide enough shade for all of the ducks. Ducks should also have continuous access to swimming areas, especially when the weather is hot and enough shelter structures to protect all of them from the elements.

If there is not enough shade to comfortably contain all the birds at one time and prevent their discomfort from direct sunlight, precipitation, or wind this could adversely affect their health and well-being.

Shelter from inclement weather. Outdoor housing facilities must provide adequate shelter, appropriate to the species and physical condition of the birds, for the local climatic conditions to protect the birds from any adverse weather conditions. Shelters must be adequately ventilated in hot weather and have one or more separate areas of shade or other effective protection that is large enough to comfortably contain all the birds at one time and prevent their discomfort from direct sunlight, precipitation, or wind. Shelter must also be constructed to provide sufficient space to comfortably hold all of the birds at the same time without adverse intraspecific aggression or grouping of incompatible birds. For birds that form dominance hierarchies and that are maintained in social groupings, shelter(s) must be constructed so as to provide sufficient space to comfortably hold all the birds at the same time, including birds that are low in the hierarchy.

Correct by October 22, 2023.

This inspection and exit interview were conducted with a facility representative.
