Type: ROUTINE INSPECTION
Date: 05-JUL-2017

3.125(c)

FACILITIES, GENERAL.

Reindeer pen: There was a small stack of hay bales stored directly on the ground inside the reindeer's shelter structure. The ground inside this shelter is also presently wet due to recent precipitation over the past few days. Additionally, the top hay bale had an accumulation of bird feces on it. Hay stored directly on the ground and not covered within the animal shelter does not adequately protect it from deterioration, molding or contamination from pests or animal waste.

All supplies of food must be stored in a manner which adequately protects such supplies against deterioration, molding or sources of contamination to ensure the health and well-being of the animals. A system which adequately protects all animal food supplies must be in place.

Correct by 07/19/2017.

This inspection and exit interview were conducted with the facility owner.
