HUMANE INDIANA WILDLIFE

Type: ROUTINE INSPECTION

Date: 05-SEP-2024

---

### 3.127(d)

#### Facilities, outdoor.

The facility has 2 red foxes, a striped skunk, and a Virginia opossum, housed outdoors, that are not adequately protected by a perimeter fence. There is a 4-foot-high plastic type privacy fence that stretches about 50 yards at the front of the property. However, this fence does not prevent unauthorized people who use the parking lot from accessing the facility and it does not keep unwanted animals out of the area where the regulated animals are housed. Perimeter fencing is important to protecting the animals at the facility from injury and disease. Perimeter fences can keep unwanted animals and unauthorized people from having unwanted contact with the animals at the facility. Perimeter fences can also serve as a secondary containment system for the animals.

Outdoor housing facilities must be enclosed by a perimeter fence that is of sufficient height (6 feet) to keep animals and unauthorized persons out. The fence must be constructed so that it protects the animals in the facility by restricting animals and unauthorized persons from going through it or under it and having contact with the animals in the facility, and so that it can function as a secondary containment system for the animals in the facility. It must be of sufficient distance from the outside of the primary enclosure to prevent physical contact between animals inside the enclosure and animals or persons outside the perimeter fence. Such fences less than 3 feet in distance from the primary enclosure, and less than 6 feet high, must be approved in writing by the Administrator.

To be corrected by December 30, 2024

This inspection and exit interview were conducted with a facility representative.
