Type: ROUTINE INSPECTION
Date: 14-DEC-2023

2.40(b)(2)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

The black alpaca's toenails are overgrown and misshapen, and all four feet are affected. The nails on the front toes curve inward, and the rear toenails curve out laterally. In addition, the fleece appears to be matted with plant material on the underside of the animal's neck.

The overgrown toenails may cause lameness and pain and lead to other foot and leg problems. In addition, the matted fleece can cause skin irritation. The alpaca's toenails must be trimmed, and also maintained as needed. The licensee stated the plant material has been removed from the animal.

Correct by: 2 JAN 2024

This inspection and exit interview were conducted with the licensee.
