Certificate: **43-C-0263**
Site: 001
SANDRA WISEMAN

Type: ROUTINE INSPECTION
Date: 04-DEC-2014

3.125(a)

FACILITIES, GENERAL.

In the Zoo section of the facility, where water buffalo, llamas, and calves were housed, there was metal-wired fencing making up the south wall of the primary enclosure. It had several broken wires leaving sharp, pointy edges that were in direct contact with the animals. These sharp points were within eye level of many of the animals. Sharp points could injure these animals housed there. The licensee must ensure that enclosures and their contents are maintained in good repair to protect the animals from injury.

TO BE CORRECTED BY: 6 February 2015

3.127(d)

FACILITIES, OUTDOOR.

In the Hot Tub section of the facility, there were areas, closest to the camels, where the perimeter fencing was heavily tilted outwards thus affecting the overall integrity of the fencing and possibly its ability to contain the animals. A durable and intact perimeter fence is an important in secondary containment to keep the camels within their enclosure as well as prevent unauthorized people or animals from entering. The licensee must have a system in place to ensure the perimeter fence is maintained in an effective manner.

TO BE CORRECTED BY: 6 February 2015

An inspection was conducted on December 4th and 5th.

An exit interview was conducted on December 5th with facility owner.
