Site: 001  
AARON ZIMMERMAN

Type: ROUTINE INSPECTION  
Date: 07-APR-2015

### 3.11(b)

#### CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

\*\*\* The whelping boxes and attached wire mesh enclosures are not being sanitized effectively between litters. There is an accumulation of hair and debris embedded between the wire mesh and wood frame that is not being removed prior to cleaning. Proper sanitization practices involve removing all organic material prior to applying a disinfectant. The whelping room has a strong ammonia odor due to this build up of hair and debris. These enclosures need to be sanitized properly between litters for the health of the dogs.

Correct by: April 15, 2015

### 3.11(c)

#### CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

\*\*\* In the whelping room, the bottles of Pyrantel and Albon need to be cleaned. The tops of the bottles are very dirty with caked on suspension. In addition, the shelf is dusty and cleaning items are stored above the medications and next to used syringes. This area needs to be cleaned and maintained to protect the medical supplies from contamination.

\*\*\* There are several empty enclosures that have feces still in the wire mesh. These enclosures need to be cleaned in a timely manner after the dogs are removed to reduce the risk of disease hazards and to promote good housekeeping practices.

\*\*\* There is an accumulation of hair and debris hanging down underneath the wire mesh enclosures in the main kennel that needs to be removed. This excess hair and debris can trap urine and feces which has caused a strong ammonia odors throughout the building.

\*\*\* There is an accumulation of dust and debris throughout the wire mesh enclosures that are not being used, along the window ledges and in the corners of the building. This excess dust and debris needs to be cleaned on a routine basis to promote good housekeeping practices.

## Inspection Report

---

Correct by: April 16, 2015

### 3.11(d)

#### **CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.**

\*\*\* There were mouse droppings along the tops and in a few of the old unused feeders being stored in enclosures in the main kennel area. An effective program for pest control needs to be maintained to reduce contamination by pests in animal areas. This needs to be addressed for the health of the dogs.

Correct by: April 15, 2015

An exit briefing was conducted with the licensee at the time of the inspection.
