Type: ROUTINE INSPECTION
Date: 21-AUG-2019

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

During inspection a used 100 ml bottle of Oxytocin injectable solution was found to be outdated, The expiration date on the Oxytocin bottle was 03/08. Additionally, a 60 ml container of SureShot de-wormer was found to be outdated,. The expiration date on the de-wormer was 01/17. Both items were being stored on a shelf in the refrigerator with current vaccines.

Expired medication and drugs may have lost their efficacy or may have degraded into compounds which may be harmful to animals receiving these products. Expired medications and drugs should not be used and should be discarded and replaced with in date product as needed.

Correct this date forward

3.1(c)(2)

HOUSING FACILITIES, GENERAL.

During inspection there were multiple broken linoleum floor tiles with visible gaps in flooring observed in the whelping room and the kitchen area. At the time of inspection there were dogs in the whelping room and nine dogs in the kitchen area.

Broken floor tiles with exposed gaps may allow moisture, urine and excreta to build up between or underneath floor tiles. This makes it difficult to adequately clean and sanitize those floor areas in which dogs are being kept.

All surfaces must be maintained on a regular basis. Surfaces that cannot be readily cleaned or sanitized, must be replaced when worn or soiled.

Correct by 11-21-2019.

3.6(a)(2)(ii) REPEAT

PRIMARY ENCLOSURES.

Inspection Report

The bottom of one vertical support tube of a dividing panel located in an occupied outside run area on the south side of the kennel building was found to be heavily corroded with exposed sharp edges. Four exterior runs on the north side of the kennel building were found to have exposed wire ends protruding into occupied runs. The broken perforated tubing and the wire ends are an injury risk to dogs occupying these kennels.

Primary enclosures must be constructed and maintained so that they have no sharp points or edges which could injure dogs occupying the enclosures.

Wire with exposed ends into occupied kennels was corrected by licensee at the time of inspection.

Non-compliance under 3.6 (a)(2)(ii) was previously identified on previous inspections and reports dated 08MAY2018. and 24APRIL2019.

This inspection and exit interview were conducted with the licensee.
