### 3.87(a) Critical

#### Primary enclosures used to transport nonhuman primates.

A male Capuchin Monkey, named Max, was able to open his transport enclosure and escape. Max was being transported in the interior of the vehicle in a collapsible metal wire dog crate. The licensee stated that they attempted to secure the points of closure of the crate. A facility representative stated during transport that the animal was able to unlock the enclosure and got loose inside the vehicle and when they pulled the vehicle over to return the animal to the enclosure the animal escaped outside when they opened the vehicle door. The monkey was in the wilderness alongside the highway for 1-2 days before being recaptured. During his escape, he injured his left arm and suffered nerve damage to the limb. He is not currently able to use the limb. The animal is being monitored by the attending veterinarian for return of function or the need for amputation. Nonhuman primates that are transported in unsafe or inadequate enclosures can become injured, escape, or be killed. Primary enclosures used to transport nonhuman primates must be constructed so that: they are strong enough to contain the primate securely and to withstand the rigors of transportation; the nonhuman primate is at all times securely contained and cannot put any part of its body outside the enclosure that could result in injury; and the doors or other closures that provide access into the enclosure must be secured with animal-proof devices that prevent accidental opening of the enclosure, including opening by the nonhuman primate. Correct by ensuring nonhuman

## Inspection Report

---

primates are transported in enclosures that can safely and securely contain them in accordance with the regulations.

Correct by 3/30/2023.

### 3.131(c)

#### Sanitation.

The hoof stock enclosures contain accumulations of metal fencing, construction debris, and trash. The Bison enclosure also contains a dilapidated wooden structure. These accumulations could lead to entrapment, cause injury to the animals, and harbor pests and vermin. Correct by ensuring that premises are kept clean and in good repair in order to protect the animals from injury and to facilitate the prescribed husbandry practices. Accumulations of trash shall be placed in designated areas and cleared as necessary to protect the health of the animals. Correct by April 28, 2023.

This inspection and exit interview were conducted with the licensee.
