Type: ROUTINE INSPECTION
Date: 27-FEB-2015

2.40(b)(2) DIRECT REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

DIRECT

***Female Yorkie #14 has excessive tartar on all teeth on the upper arcade on both sides. The 4th upper premolars on both sides are completely covered in tartar. The gums above the upper molars and upper canine teeth are also bright red in color. These signs are consistent with dental disease that can be painful and may lead to the dog being unwilling to eat. Additionally, dental disease has been linked to other health problems including kidney and heart disease.

***Male Yorkie #33 has tartar build-up on all of its teeth. Especially, the 4th upper premolar on the left side and both lower canines are completely covered with tartar. It is missing several teeth including lower incisors. There is no record of treatment on hand for this animal. This dog is also drooling significantly from its mouth. These signs are consistent with significant dental disease and pain.

Both of these dogs are in need of veterinary care. The licensee must have these dogs examined by a veterinarian by 2 March 2015. Failure to provide adequate veterinary care can lead to pain and suffering in the animals and does not ensure appropriate care to animals in the facility.

Correct this by contacting a licensed veterinarian and to have these animals examined. Licensee must follow all recommended treatment and maintain documentation of treatment for future review by APHIS officials.

Even though this is a repeat NCI, the licensee must have these animals examined by 2 March 2015.

THIS IS A REPEAT NON-COMPLIANT ITEM THAT REMAINS UNCORRECTED

2.40(b)(3) DIRECT REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Inspection Report

*** Two dogs were found in need of veterinary care during this inspection. The licensee was unaware of the condition of both of these dogs and no documentation of treatment or care was on hand concerning these dogs. The licensee must ensure that all animals are observed daily to ensure that medical problems can be discovered and appropriate care given in a reasonable amount of time. Failure to observe animals daily and give needed care can result in animal suffering. This continues to be a problem at this facility with dogs found in need of care without the licensee's knowledge of the condition of the animals on previous inspections dated 04 March 2014 and 01 July 2014.

THIS IS A REPEAT NON-COMPLIANT ITEM THAT REMAINS UNCORRECTED

3.1(c)(3)

HOUSING FACILITIES, GENERAL.

*** Most of the inside enclosures in the sheltered facility have surfaces in contact with the dogs that are dirty and require cleaning. There are fecal smears, grime build-up and dirt in all of the corners of the enclosures and on enclosure walls. These surfaces must be spot cleaned daily as needed to ensure that the living space for the dogs remains clean and disease hazards are kept to a minimum. Failure to clean and maintain these enclosures exposes the dogs to unnecessary disease hazards and does not satisfy accepted cleanliness standards. Correct this by cleaning and maintaining all primary enclosures in a sanitary condition.

Correct by: 01 March 2015

3.4(b) DIRECT REPEAT

OUTDOOR HOUSING FACILITIES.

*** Six adult dogs are being housed outdoors with shelters that have no bedding. Although the dogs are pair housed, there is no bedding in the shelter boxes. The outside temperature during this inspection was 16 degrees F. Temperatures tonight are expected to drop below zero with daytime temperatures over the next few days in the mid-20's to low 30's. The licensee stated that he provides the dogs with sawdust as bedding. Although sawdust is acceptable as bedding when required for temperatures dropping below 50 degrees F, it is not acceptable when additional bedding is needed when temperatures drop below 35 degrees F. Straw, hay, or other bedding is required to allow these dogs to nest and maintain body heat. Sawdust will not provide adequate insulation to the dogs. Failure to provide adequate bedding exposes the animals to unnecessary temperature extremes and can result in cold stress or injury to the dogs. Correct this by providing these dogs with adequate bedding.

***The licensee was advised during this inspection on 27 February 2015 to provide these dogs adequate bedding.

3.9(b) REPEAT

FEEDING.

*** Two self-feeders being used in the sheltered kennel at this facility were found to be dirty, and contained caked feed in them. Caked feed is not safe for the dogs to eat and can lead to health problems or digestive upset. All feeders must be kept in good repair and maintained clean and sanitary. Correct this by cleaning and maintaining all feeders as needed.

THIS IS A REPEAT NON-COMPLIANT ITEM THAT REMAINS UNCORRECTED

3.11(a)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

*** Several outside runs for the sheltered kennel have feces in excess of one day in them. Even though it is understandable due to the recent weather that outdoor washdowns have not been sprayed down, the licensee must ensure that all primary enclosures have feces removed on a daily basis to ensure the dogs are able to remain clean, dry, and free to walk in an enclosure free of feces. Failure to remove feces on a daily basis can expose the dogs to unnecessary disease hazards and does not satisfy accepted husbandry or cleanliness standards.

Correct by: 01 March 2015

***Inspection and exit interview conducted with the licensee.
