Certificate: **93-C-1034**
Site: 001
WildCare

Type: ROUTINE INSPECTION
Date: 18-MAR-2014

3.131(d)

SANITATION.

Abundant rodent feces were found in the food storage area, including inside a cabinet designed to store food for the animals on exhibit.

The presence of pests can create an unhealthy environment for the animals. A safe and effective program for the control of insects, ectoparasites, and avian and mammalian pests should be established and maintained in order to protect food from contamination, and animals from exposure to pests. Pest control helps to safeguard the well-being of the animals.

To be corrected by 4/18/14.

An exit interview was conducted with a facility representative.
