Certificate: **55-B-0069**
Site: 003
THE FARM AT WALNUT CREEK

Type: ROUTINE INSPECTION
Date: 12-NOV-2024

3.150(a)

Facilities, general.

An enclosure housing three Gambles Quail had a large hole in the enclosure wire. The hole in the enclosure was approximately 3 feet long and created a large gap in the enclosure that is approximately 6 inches wide.

A facility representative repaired this hole by placing fastening devices on the wire enclosure at the time of inspection.

Failure to ensure that enclosures are appropriately constructed can result in predators gaining access to the animals, injury/death, and possible escape.

The facility must ensure that housing facilities for birds must be designed and constructed so that they are structurally sound for the species of bird housed in them and protect the birds from injury. Correct by 20-November-2024.

3.127(b)

Facilities, outdoor.

The facility is providing an insufficient amount of shelter for the hoof stock in the outdoor drive-through section of the facility. The drive-through section of the facility contains numerous species including but not limited to bison, elk, cattle, and zebra which totals about at least 300 animals. The drive-through section contains 4 shelters with openings measuring approximately 32 inches in height and 4 hay shelters with openings measuring approximately 27 inches wide and approximately 48 inches in height. These structures are inadequate as they are not large enough for all the individuals of these species to utilize them for shelter.

The facility does have ravines and other forms of windbreaks, but they provide either minimal or no overhead protection from the elements. Due to the change in season following the last inspection, the trees have also lost most or all their foliage. The facility does have a section of the barn that they state is approximately 60 feet by 60 feet, but it was closed off to the hoof stock at the time of inspection. The barn does have a roof overhang, but it does not provide side protection from the elements.

Failure to provide shelter from inclement weather can result in discomfort to the animals during wind, rain, snow, or other hazardous conditions. Natural or artificial shelter appropriate to the local climatic conditions for the species concerned
