NATURAL HISTORY EDUCATION CO OF MIDSOUTH

Type: ROUTINE INSPECTION

Date: 28-MAY-2019

3.14(a)

PRIMARY ENCLOSURES USED TO TRANSPORT LIVE DOGS AND CATS.

As part of this mobile exhibition inspection, transportation of the animals was inspected. The exhibit dog, a female British Labrador Retriever, was transported from this exhibit site to the next exhibit site for the day in the vehicle/car front seat. The dog was not contained in any manner. The dog could be injured if the car makes any sudden movements or any vehicle mishap occurs. All exhibit dogs being transported must be contained in a primary enclosure such as a compartment, transport cage, carton or crate. Correct by June 1, 2019.

3.137(a)(2)

PRIMARY ENCLOSURES USED TO TRANSPORT LIVE ANIMALS.

The crate used to transport and house for the day the raccoon is damaged. The plastic piece between two of the ventilation openings on the left side of the crate was torn loose from its attachment to the upper portion of the crate and still attached at the lower portion. The piece of plastic with its sharp end was projecting into the enclosure. The raccoon was noted sticking its front leg and "hand" through the enlarged opening created by the damage to attempt to grab an item outside its crate. The raccoon may be injured by the sharp point while moving around in the crate or sticking its arm out through the enlarged opening. All transport crates shall have interiors free of any protrusions that could be injurious to the live animals contained therein. Correct by June 1, 2019.

This inspection and exit interview were conducted with undersigned.

This inspection was conducted at Leipers Fork Library in Leipers Fork, TN.
