Type: ROUTINE INSPECTION
Date: 08-FEB-2016

3.54(b)

FEEDING.

At least 20 self-feeders are rusty or are pitted on sides and/or lids especially the buck enclosures. Self-feeders with significant rust or otherwise pitted (especially around the feed hopper area) may cause abrasions to animals while eating. Additionally, rust makes cleaning and sanitization more difficult. Improperly sanitized surfaces can harbor disease. Food receptacles must be kept clean and sanitized at least once every 2 weeks. The rusty and/or pitted self-feeders must be repaired or replaced so that the feeders can be adequately cleaned and sanitized. Correct by March 1, 2016.

An exit briefing was conducted with the owner.
