STABLES INC

Type: ROUTINE INSPECTION

Date: 02-NOV-2022

2.75(b)(1)

Records: Dealers and exhibitors.

There are 10 rabbits currently present at the facility, however, the inventory identified only four rabbits. The inventory identifies three fainting goats present at the facility, but only two fainting goats are currently present. According to the facility representative several new rabbits have been born recently and one fainting goat passed away but was not documented. Failure to maintain accurate records of acquisitions and dispositions can make it difficult to account for animals under the facility's care and ensure that animals are obtained from appropriate sources. The facility must keep and maintain up-to-date records regarding acquisitions and dispositions.

Correct by: November 9, 2022.

2.134

Contingency planning.

The facility has not developed a written plan to provide humane care for handling animals in the event of an emergency or disaster. A written plan shall be developed and maintained to provide guidance for the appropriate care of the animals during emergencies that could reasonably be anticipated. The plan shall address the response, personnel responsible for the actions to be taken, chain of command, etc., as required in Section 2.134 of the animal welfare regulations. Correct by November 16, 2022.

Inspection Report

3.125(a)

Repeat

Facilities, general.

There are several areas of the facility in disrepair. There is a vertical wooden plank on the back fence of the goat pen which is broken and split approximately 1.5 ft off the ground. There is also a fractured horizontal wooden board on the front fence line of the cattle pasture. Two goats were seen walking on the outside of the enclosure fence with all gates closed. According to the facility representative they have been having trouble with the goats escaping and are working on correcting the issue.

Broken boards and damage to primary enclosure fencing leads to sharp edges and narrow openings that can cause injury or entrapment of an animal. Animals that can escape their primary enclosure are at risk of coming into contact with other animals, encountering dangerous situations and at an increased risk for injury.

Correct by ensuring all enclosures are structurally sound and maintained in good repair to protect the animals from injury and to contain the animals.

This inspection and exit interview were conducted with a facility representative.
