FABGENNIX INTERNATIONAL,
INC

Type: ROUTINE INSPECTION

Date: 26-JUL-2023

3.51(b)

Facilities, indoor.

This inspection occurred at approximately 1:30 pm on July 26th. At that time, the outside temperature was approximately 98 F. The temperature inside the rabbit barn was 86 F with all the air conditioners running. The maximum temperature for July 26th went to 101 F so the maximum temperature inside the barn likely went above 86 F. At temperatures over 85 F rabbits are at risk for hyperthermia.

At the time of inspection, the rabbits appeared warm but not in distress.

Indoor housing facilities for rabbits shall be adequately ventilated to provide for the health and comfort of the animals at all times. Adequate ventilation means maintaining the temperature at a comfortable level and ensuring fresh air is circulated through the barn to prevent odors.

The facility needs to ensure the barn is adequately ventilated at all times.

To be corrected by: Aug 14, 2023

This inspection and exit interview were conducted with facility representatives.
