Certificate: **48-A-0366**
Site: 002
Rebecca Mosshart (PROTECTION)

Type: ROUTINE INSPECTION
Date: 30-JUN-2015

3.1(c)(1)(1)

HOUSING FACILITIES, GENERAL.

There is a quarter-sized rusted area in enclosure #8 in one of the whelping buildings. There are at least 5 outside enclosure gates that are rusted to the point that the metal is starting to flake. Rusted surfaces cannot be readily cleaned and sanitized. All surfaces must be maintained in a manner that keeps them free from excessive rust that prevents the required cleaning and sanitization. Correct by 30 July 2015.

3.1(c)(3) REPEAT

HOUSING FACILITIES, GENERAL.

There are approximately 6 metal dog doors that have an accumulation of dog oil, dirt, and grime. This material covers up to approximately 40-50% of the outdoor surface of some of these doors. Surfaces that are not sanitized on a regular basis can lead to an increase in disease transmission. All hard surfaces in contact with dogs must be spot-cleaned daily and sanitized to reduce disease hazards.

3.6(a)(2)(1)

PRIMARY ENCLOSURES.

There are two enclosures each housing one dog where the metal is rusted to the point that there are sharp jagged metal edges present. One is a free-standing enclosure and the other is a horse trailer. Sharp jagged edges could cause injury to the dogs. All surfaces must be free of sharp, jagged edges. Correct by 7 July 2015.

This routine inspection and exit interview were conducted with a facility representative.
