ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE.

In June 2016, PI staff recognized that a group of Nile rats were having an unexpected adverse reaction to a test compound, which the PI staff attempted to treat. Several days later, the animals had not responded to the treatment instituted by the PI staff, the Attending Veterinarian was notified of the issue who then treated the Nile rats appropriately. A facility must maintain a program of adequate veterinary care that includes a mechanism of direct and frequent communication to the attending veterinarian so that timely information on problems of animal health is conveyed to the attending veterinarian for the health of the animals. The facility has instituted several corrective measures to prevent recurrence of this issue.

This item has been addressed by the facility and was self-reported to USDA.

An exit briefing was conducted with a facility representative.
