

## Inspection Report

Lewis Bloom  
1901 Frontier Rd  
Clay Center, KS 67432

Customer ID: **5889**  
Certificate: **48-A-1316**  
Site: 001  
Lewis Bloom

Type: ROUTINE INSPECTION  
Date: 20-MAR-2017

### 3.1(c)(3)

#### HOUSING FACILITIES, GENERAL.

\* There is a mixture of dirt, grease and other excreta accumulating on five metal entryway doors, one plastic bucket and on the exterior metal wall of one enclosure. Twelve dogs are in contact with the affected surfaces located in shelter housing. The affected area covers approximately 20 percent of the metal wall area and 75 percent of the metal entryway doors. Cleaning of surfaces is necessary to prevent an accumulation of excreta and other disease hazards. This indicates an unsanitary living condition exists that could lead to potential disease or health risks. Surfaces which are not cleaned and sanitized properly or often enough, increase the risk of disease hazards for the dogs. Cleanliness is important to the health and well-being of the animals. All surfaces of housing facilities must be cleaned and sanitized when necessary to satisfy generally accepted husbandry standards and practices. The licensee must ensure that all surfaces which any dog comes in contact with must be spot cleaned on a daily basis and sanitized in accordance with 3.11 (b). Correct by 4/3/17.

### 3.11(a)

#### CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

\* One outdoor enclosure run has an accumulation of dry in appearance excreta on an estimated 20 percent of the enclosure flooring. Two dogs are in contact with the affected flooring located in sheltered housing. It indicates unsanitary living conditions exist that could increase the risks of disease transmission, which negatively affects the health of the dogs. Accumulations of excreta can potentially create odors, serve as an attractant for flies, insects and other pests. In addition, an accumulation of excreta reduces the clean surface area available for the dogs to walk on. The licensee must remove excreta from the primary enclosure daily to prevent an excessive accumulation of feces and food waste, to prevent soiling of the dogs contained in the primary enclosures, and to reduce disease hazards, insects, pests and odors. Correct by 3/22/17.

\* The facility inspection and verbal exit briefing done on 3/20/17 were conducted with the licensee.

\* Copy of the inspection report was sent by certified and regular mail.
