Marty Murray
4668 North Farm Road 1
Ash Grove, MO 65604

Customer ID: **29701**
Certificate: **74-A-1496**
Site: 001
Marty Murray

Type: ROUTINE INSPECTION
Date: 30-DEC-2014

3.6(a)(2)(1)

PRIMARY ENCLOSURES.

3.6(a)(2)(i) Sharp Points

The wire mesh between two adjoining enclosures had a 3 inch X 1 inch broken area at the bottom, resulting in sharp points sticking into both enclosures at the level of the dogs' feet. Sharp points can result in injury to the dogs, causing pain and possible infections. The licensee must ensure that primary enclosures do not have sharp points or edges that could injure the dogs.

To be corrected by January 5, 2015. Note: A facility representative corrected the problem during the inspection.

3.9(a)

FEEDING.

The room used to store unopened bags of dog food had a strong odor of animal waste material. Many piles of cat feces were present on the floor behind the stack of dog food. The facility representative stated that the farm cats are allowed access to this room. Feces and urine can contaminate dog food, affecting the food's palatability and nutritive value. The licensee must ensure that the dog food is stored in a clean area free of possible contamination. To be corrected by January 5, 2015.

3.11(b)(2)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

3.11(b)(2) Sanitization of primary enclosures.

Several of the dog doors in both of the sheltered buildings had an excessive buildup of dirt and grime. The facility representative stated that it had been several weeks since the primary enclosures had been sanitized. Inadequate sanitization can result in a buildup of dirt and grime, which harbor organisms that can result in disease in the dogs. The licensee must ensure that primary enclosures are properly sanitized at least once every 2 weeks using one of the methods prescribed in the Animal Welfare Act regulations.

To be corrected by January 5, 2015.

Prepared By: KONNIE PLUMLEE, D V M USDA, APHIS, Animal Care
