Gary Felts  
Box 81  
Kingsley, IA 51028

Customer ID: **8360**  
Certificate: **42-A-0757**  
Site: 001  
GARY FELTS

Type: ROUTINE INSPECTION  
Date: 18-NOV-2014

### 2.40(b)(2) DIRECT

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

A male white Standard Poodle, microchip # 0402123964, was seen lying in the back of his enclosure with a black substance around his left ear and on the left side of his face. Closer inspection revealed that the hair around the ear was wet and caked with a thick black substance, and the ear was red and inflamed. Licensee stated the dog had been evaluated for this condition by a veterinarian in February 2014 and was told to switch the dog to a pork based diet. Licensee has been treating the ear with vinegar and peroxide. Poor ear health can cause pain and discomfort to the dog. The above listed dog must be evaluated by a licensed veterinarian by the end of business on November 18, 2014 for proper diagnosis and treatment. Diagnosis and treatment must be documented and made available to inspectors upon request.

To be corrected by COB on November 18, 2014

### 3.1(c)(3) REPEAT

#### HOUSING FACILITIES, GENERAL.

The walls of the outside enclosures for the (7) dogs housed on the west side of the " Red Roof Building" and the walls of the outside enclosures for the (9) dogs housed on the north side of the " Tool Shed", and the front wall of the shelters provided for the (25) big dogs in the " Big Dog run" area have an accumulation of dirt, grime, and other debris. All surfaces of a housing facility must be cleaned and sanitized when necessary to satisfy generally accepted husbandry standards and practices. These areas must be cleaned more frequently and sanitized at least once every two weeks

### 3.4(b)(3) DIRECT

#### OUTDOOR HOUSING FACILITIES.

Four shelters provided for eight adult dogs in the " big dog run" area do not provide a wind/rain break at the entrance of the shelters. The temperature at the time of inspection ranged from 10 degrees to 14 degrees. The temperatures over the weekend dropped below zero and wind advisories were in effect. Missing wind/rain breaks make it difficult for the dogs to get out of the weather and maintain their body temperatures in the cold weather.

## Inspection Report

---

Wind/rain breaks of some kind need to be provided for all shelters.

To be corrected by COB November 18, 2014.

### 3.4(b)(4) DIRECT

#### OUTDOOR HOUSING FACILITIES.

The shelters provided for the two springer spaniels in the enclosure in the "big dog run" area does not have bedding material provided for the dogs. The temperature at the time of inspection ranged from 10 degrees to 14 degrees. All shelters must contain clean, dry bedding material when the temperature is below 50 degrees and additional bedding when the temperature is 35 degrees or lower to help the dogs to maintain their body temperature. Dry bedding, a heat source, or some other method of conserving body heat must be provided for the animals.

To be corrected by COB November 18, 2014.

### 3.11(d)

#### CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

The walkway of the "Hunte" building was littered with mouse droppings. A dead mouse was also found amongst the droppings. Infestation of pests can cause contamination of dog areas and poses a disease risk to the dogs. Licensee must establish and maintain an effective pest control program to reduce the risk of contamination by mice and promote the health and well-being of the dogs.

To be corrected by December 2, 2014.

Inspection and exit interview conducted with facility representative.

#### Additional Inspectors

Jirsa-Smith Amy, Animal Care Inspector
