

## Inspection Report

Pymatuning Deer Park Inc  
842 E Jamestown Rd  
Jamestown, PA 16134

Customer ID: **2242**

Certificate: **23-C-0019**

Site: 001

PYMATUNING DEER PARK

Type: ROUTINE INSPECTION

Date: 13-APR-2016

### 3.84(a)

#### CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

The enclosures housing the Black and White lemurs as well as the enclosures housing the Olive Baboons need to be cleaned. There was a build-up of food waste and fecal material on the floors and shelving platforms. Buildup of wastes should be removed to promote the health of the animals and to reduce disease hazards. Excreta and food waste must be removed from inside each indoor primary enclosure daily and from underneath them as often as necessary to prevent an excessive accumulation of feces and food waste, to prevent the nonhuman primates from becoming soiled, and to reduce disease hazards, insects, pests, and odors. The Indoor primary enclosures must also be sanitized at least once every 2 weeks. These enclosures were cleaned at the time of the inspection.

Correct from this day forward.

### 3.131(a) REPEAT

#### SANITATION.

\*\*\*The enclosure housing the cougars need to be cleaned. Upon inspection there was an accumulation of carcass materials within the enclosures. When providing carcasses, after 24 hours the carcasses should be removed to prevent disease spread and to promote the health of the animals.

\*\*\*The enclosure housing the African Crested Porcupines had a buildup up food and fecal material. This enclosure needs to be cleaned often enough to remove the waste and prevent future accumulations. The waste should be removed to promote the health of the animals and to reduce disease hazards.

An exit briefing was conducted with the licensee with ACI- Andrea D'Ambrosio and VMO Dr. Michael Neafsey at the time of the inspection.
