Subiaco, AR 72865

Customer ID: **21395**  
Certificate: **71-A-0874**  
Site: 001  
PHIL WEYMOUTH, YOLANDA WEYMOUTH

Type: ROUTINE INSPECTION  
Date: 09-DEC-2014

---

### 2.40(b)(2) REPEAT

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

\*\* Inspectors observed a bottle of Gentamicin eye drops with an expiration date of September 2014, a bottle of Conzol spray with an expiration date of March 2010 and a bottle of Cephalexin with no expiration date listed on the label that was in a drawer with medications ready for use in the animals. Expired medications may be contaminated, may not work as expected, and could harm the animals if used. All medications used on the animals must not be expired. Licensee must ensure that all medications maintained for and used on the animals are not expired.

### 3.1(c)(3) REPEAT

#### HOUSING FACILITIES, GENERAL.

\*\* Inspectors observed areas in need of cleaning and sanitization. The shelter buildings behind the house had a buildup of hair and dirt on the back wall and underneath the enclosures. Also, the shelter building behind the house had cob webs and hair accumulated under a shelf above the enclosures. The dog doors throughout the the facility had a build up of dirt and oils on the surface leaving a brown residue. In order to protect the dogs from disease hazards, to prevent the dogs from becoming soiled, and to facilitate good husbandry practices, hard surfaces which the dogs have contact with must be spot cleaned daily and sanitized at least every two weeks. The licensee must spot clean, sanitize and maintain all other surfaces as needed to satisfy generally acceptable husbandry standards.

### 3.1(f) REPEAT

#### HOUSING FACILITIES, GENERAL.

\*\* The south building used for whelping had a waste disposal pipe in disrepair. The outside drain pipe on the south side of the building did not fit into the washdown properly resulting in waste contaminating the enclosure below the drain pipe. The drain pipe is also leaking under the bottom washdown resulting in waste accumulating on the ground. Drainage systems in disrepair can contribute to disease hazards, odors and pest. The licensee must repair the drainage system.

### 3.4(b) REPEAT

---

Prepared By: JOHN LIES, A C I USDA, APHIS, Animal Care

## Inspection Report

---

### OUTDOOR HOUSING FACILITIES.

\*\* Two enclosures had igloo type shelters that are not large enough to allow the animals in the enclosures to make normal postural adjustments. The enclosure with two Spaniels must have an additional shelter provided or a larger shelter provided. The enclosure containing a Labrador type dog must have a large shelter provided. Shelters must be large enough to allow each animal to sit, stand, and lie in a normal, as well as turn about freely. This was corrected the day of the inspection.

### 3.6(a)(2)(1) REPEAT

### PRIMARY ENCLOSURES.

\*\* Inspectors observed broken wire resulting in sharp points inside of no fewer than six animal enclosures. The animals could come into contact with the sharp points causing injury. The licensee must remove, repair or replace the wire and develop a maintenance plan to ensure that all enclosures are free of sharp points.

This inspection and exit briefing conducted with the owner.

End of report.

### Additional Inspectors

Cooper Natalie, Veterinary Medical Officer
