

## Inspection Report

Shirley Farms  
2557 South Bluff Rd  
Obion, TN 38240

Customer ID: **44856**  
Certificate: **63-C-0201**  
Site: 001  
SHIRLEY FARMS

Type: ROUTINE INSPECTION  
Date: 26-OCT-2015

### 2.40(a)(1) REPEAT

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

The written program of veterinary care dated 7-24-15 is still the most current version. No changes have been made since the last inspection. The program is still incomplete lacking information in many areas. There is no information regarding dosages and frequency of administration of any drugs for the control of internal, blood and external parasites and vaccines. There is simply a statement that the veterinarian does not administer these drugs.

Conversations with staff and the owner show that the animals are currently being dewormed orally and treated with fly spray. The section in the PC regarding capture methods states that rompum and ace are to be used but does not state who will be administering these drugs and if the facility staff is to do so what dosages they should use for the different species. There is nothing written regarding any TB testing of susceptible species to include some of the hoofstock and the non-human primates.

The facility and the attending veterinarian need to jointly decide on all preventative veterinary procedures, drugs and vaccines to be administered to the animals even if they are going to be administered by the facility staff. The instructions for these procedures, drugs and vaccines should be detailed in written form and then the facility shall ensure that they are followed. The facility shall document and maintain a written program of veterinary care approved by the attending veterinarian to ensure the appropriate health care for the animals at the facility.

### 2.40(b)(1)

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

At least three of the goats observed today are in need of trimming of their hooves. The hooves are longer than appropriate and are starting to turn in and up. These long hooves can lead to discomfort to the animal and over time will lead to abnormal locomotion and potential joint/muscle issues. The facility shall supply appropriate hoof care services to maintain normal hoof conformation for the goats. Correct by Nov. 2, 2015.

### 3.127(b)

#### FACILITIES, OUTDOOR.

The enclosure currently housing the African Crested porcupine does not sufficiently provide protection from the

## Inspection Report

---

elements including today's rain. There is a pet taxi type crate available in which the porcupine was staying but it is designed with openings for ventilation, has one small side completely open (where door usually is) and has holes in the roof made by the porcupine. The numerous openings do not keep out the cold, wind and rain. Lack of adequate protection from the elements can lead to discomfort and potential distress. The porcupine needs to be supplied with shelter appropriate for the animal to afford it protection from and to prevent discomfort from inclement weather.

Correct by 10/27/15.

Consultation with a veterinarian/treatment has been provided for the deer and snow macaque cited under 2.40b2 on the previous inspection.

Exit conducted with undersigned facility representative.
